RINGA: One platform, endless possibilities

Indonesia, with its rapid economic growth, accelerated urbanization, and strong demand for digital transformation, is emerging as a key market for production and warehousing parks, offering tremendous potential for smart park development. The RINGA Smart Park Solution is a comprehensive solution developed by China Mobile International Limited (CMI) for the industrial parks customers.

RINGA Smart Park Solution combines advanced technologies such as 5G, AI, IOT, Big data, and cloud computing to connect park business subsystems and smart devices.

It offers diverse application scenarios including park security, energy management, environmental monitoring, and visualized command and dispatch. The goal is to achieve integrated park data, observable status, manageable operations, and controllable events. It is mainly for the campus, warehouse, mining, community, buildings and other scenarios, the use of private deployment method of delivery on the ground.

RINGA Smart Park application highlights are as follows:

- **Device Convergence** : Integrate Hikvision/Dahua's overseas platform, gather data information of different brands and categories of intelligent terminals, realize unified management of building equipment, and support building security, personnel attendance and vehicle management and other scenarios.

- **Standardized components** : Provide standard, configurable component services so that in the building can quickly build component applications and provide online system services for the

building personnel.

- **Business convergence** : Open up the business data interaction between different application scenarios, realize intelligent linkage of business scenarios, and realize smarter digital applications.
- **Intelligent Operation Big Screen Service** : Provide 2D/3D visualization configuration service, clearly present operation data through visual charts, real-time understanding of the park status, and provide data support for decision makers.

As a global leader in telecommunications, CMI brings unique technical and experiential advantages to the construction of smart parks. We aim to collaborate with local Indonesian carriers, hardware manufacturers, software developers, and system integrators to create a comprehensive, integrated smart park ecosystem. Through the RINGA platform, we aim to offer one-stop smart park solutions for clients, encompassing network connectivity, security management, data analytics, and cloud services, propelling Indonesia's smart park initiatives to new heights.

If you'd like to have further information, please schedule a meeting with our attendants through MyBATIC or stop by our meeting table in the Jakarta Room at BICC. We look forward to discussing potential collaborations with you in BATIC.
